SafeCloud
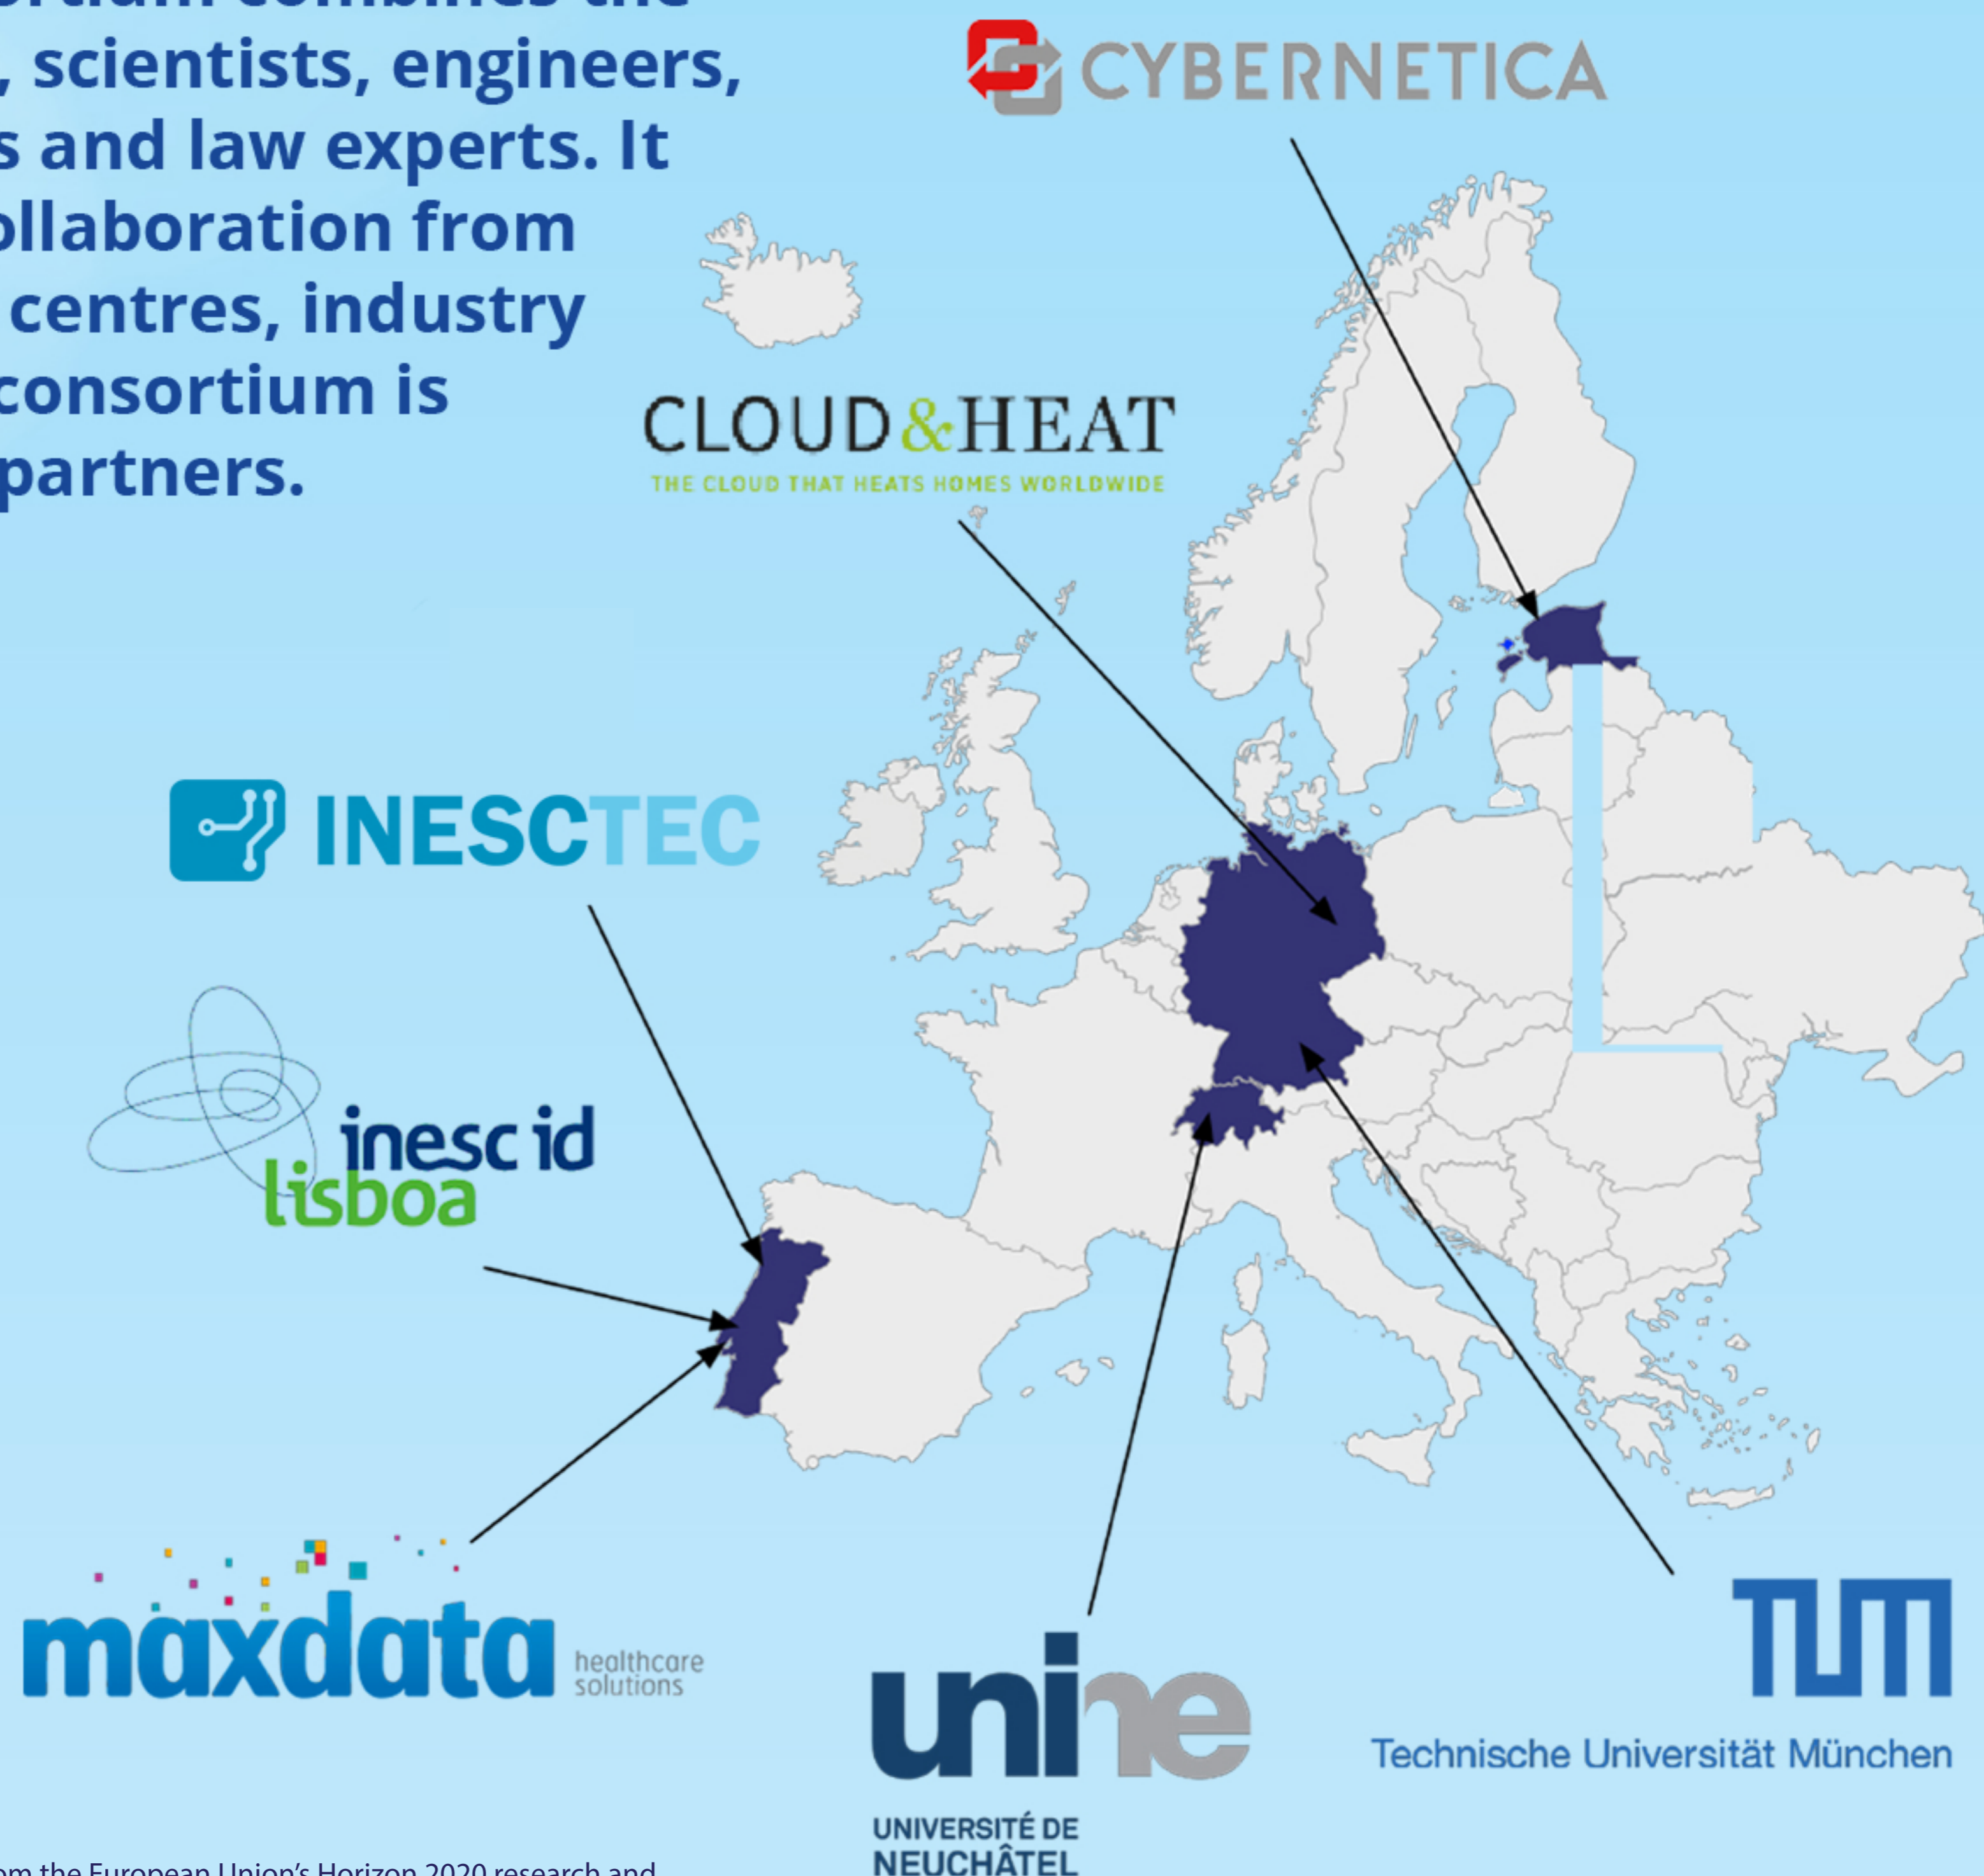

MISSION

SafeCloud will re-architect cloud infrastructures to ensure that data transmission, storage, and processing can be:
► Partitioned in multiple administrative domains that are unlikely to collude, so that sensitive data can be protected by design;
► Entangled with inter-dependencies that make it impossible for any of the domains to tamper with its integrity.

CONSORTIUM

The SafeCloud consortium combines the skills of technicians, scientists, engineers, analysts, developers and law experts. It benefits from the collaboration from academia, research centres, industry and end-users. The consortium is composed of seven partners.
